

Puck Antenna

General Description

The low-profile High Gain Puck Antenna is totally enclosed, secure, and waterproof for data transmission. The Puck Antenna's increase in signal or gain is 1–3 dBi (decibels relative to an isotropic radiator).

The High Gain Puck Antenna is ideal for wireless communications where you require a discrete antenna but can't compromise on performance.

Specifications

Part Number	MNA-AN-PU
dBi	1-3
Diameter	80mm (3.14 inches)
Thickness	15mm (0.59 inches)
Mounting Nut	M12
Coax Lead Length	91.4cm (36 inches)
Antenna Connector	RP-SMA
Housing Rating	IP65
Supported Frequencies (MHz)	868, 900, 920, 940
Weight	68 g (2.4 oz)

Horizontal Gain Pattern

- 868 MHz
- 900 MHz
- 922 MHz
- 940 MHz

Vertical Gain Pattern

- 868 MHz
- 900 MHz
- 922 MHz
- 940 MHz
