

## **Senior Software Developer**

### **Job Description**

Be a part of one of Utah's fastest growing technology companies. We're looking for driven software engineers that can help design and develop Monnit's leading hardware and software solutions. Monnit's software engineering position requires strong interpersonal and communication skills.

### **Responsibilities**

Senior Developer is responsible for designing, implementing and updating a variety of software applications. Candidate will implement new features as well as fix bugs as they are found. Participation in onsite daily team planning meetings is required. Work in multiple development environments building web applications, desktop applications, and mobile applications. An ideal candidate thrives on challenging projects, and has the ability to take ownership to take them from requirement gathering through deployment.

### **Qualifications**

Bachelor's degree in computer science or a related area.

3-6 years of experience with C# and ASP.Net MVC framework

Problem solving skills

Proficiency with the following:

- C# - Visual Studio

- SQL Server

- .Net MVC Framework

- HTML

- JQuery/Javascript

- CSS

### **Additional skills**

Java language

Relational database design experience

NoSql data store experience

Windows Forms/Java Swing experience

### **Compensation**

TBD based on experience.

### **Additional Information**
