ASP.Net MVC Framework Version 4.0

SMTP Server Information

Recommendations

It is recommended to have a Windows Server Admin or Experienced .Net Developer to install and configure the application also, to have SQL Server DBA prepare the database platform.

Due to how much data that can be stored, we **HIGHLY** recommend having a SQL Server DBA on staff or contracted to handle indexing issue's that will arise.

Monnit software to install and run

iMonnit Enterprise Configuration Manager

Graphical interface that will configure and run tests on the two main applications, iMonnit Enterprise Web Application and iMonnit Server.

iMonnit Enterprise

Web interface to view and interact with sensors.

iMonnit Server

Host to communicate with and support multiple gateway types
