GET STARTED!

Your ultralow temperature (ULT) freezers and systems (-80°C/-112°F and below) must tell you how well they perform to protect valuable assets like bioscience research, vaccines, pharmaceuticals, and cryogenic samples. Monnit Wireless Low Temperature Sensors connect to the Internet of Things (IoT) to send critical ULT data to the cloud so you can keep a close eye on ULT freezer operations 24/7.

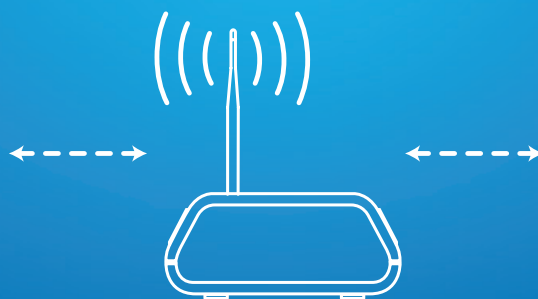

With Monnit -80°C Remote Monitoring Solutions, you get:

- A state-of-the-art IoT sensor subscription service—Refresh devices every three years.
- National Institute of Standards and Technology (NIST) certification—We calibrate your sensors to NIST requirements.
- An annual audit service—We assess your sensor and IoT network configurations to ensure they're optimized for your application.
- Custom reports—With iMonnit Premiere—our cloud monitoring software—we offer a real-time reporting dashboard customized to your critical data points.
- Instant alerts—When a preset temperature parameter is breached, the system sends text, email, or voice call notifications.

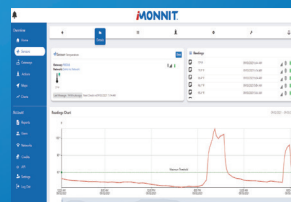

Remote Monitoring for -80°C & Below Storage

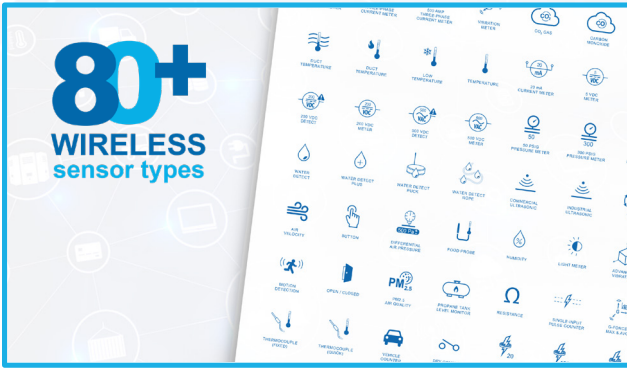

**80+
Sensors**

**Wireless Gateways
Cellular or Ethernet**

**Alerts / Data
in the Cloud**

More Than 80 Wireless Sensors to Fit Your Needs!

Basic online sensor cloud remote monitoring and notifications are free with all wireless sensors.

Advanced sensor monitoring is available with iMonnit Premiere™—our cloud monitoring software—for a low-cost annual subscription.

-  **80+ Wireless Sensors**
Custom development also available
-  **2,000 - ft Range**
(660m) through 18+ walls with ALTA XL® Gateway
-  **10 - Year Battery life**
From two AAs
-  **Fast & Easy Setup**
Monitor within 15 minutes

The Industry's Best Solution

You need the best technologies and data to make the best decisions in biotech and pharmaceutical cold chain operations. Monnit helps you protect research and critical assets across your cold chain and streamline processes using real-time IoT data logging and alerts, eliminating manual temperature checks.

When you put Monnit Sensing Solutions—wireless IoT sensors, gateways, and online software—to work, you're ready to make the best decisions, take the right actions, and keep your ULT freezers and equipment running strong.

Need Additional Products?

Do you need product modifications or accessories like longer sensor leads, batteries, or custom labels?

About Monnit

With 13+ years as an award-winning IoT innovator, Monnit has deep roots as a global IoT leader with remote monitoring solutions delivering over 39+ billion data points in more than 85 countries for over 52,000 customers.

Monnit's at the core of the IoT value proposition as a prominent creator of IoT data for scientists worldwide. Our team is dedicated to innovation and customer satisfaction.
